APPLICATION

Row crops

Apply in seed row at planting at a rate of **1 pound (454 grams/16oz) MycoGenesis[™] per acre.**

Root Injection

For trees, mix 1 pound (454 grams/16 oz) of MycoGenesis[™] in 20 gallons of clean water. For established trees, inject 64-128 ounces per tree into the root zone around the drip-line of the tree.

Root Dip

For trees or plants, mix 1 pound (454 grams/16 oz) of MycoGenesis[™] in 20 gallons of clean water. Dip roots into solution and plant.

Potted plants

Mix 1 gram of MycoGenesis[™] into a gallon of water. Drench the mixture into pots to saturate the plants roots. Use approximately 10 grams of MycoGenesis[™] per cubic yard of soil mix.

For Best Results:

Add 12.5 oz. of a Pepzyme[™] product for every 1 pound of MycoGenesis[™] applied.

For maximum benefit of MycoGenesis[™], it is important that the Mycorrhizae contact the root or are in the root zone of the plant. If material is going to be surface sprayed, BioGenesis[™] is the best option.
